

BUILDER SERIES

JRi created this product line to assist in the vehicle build process by offering predetermined lengths. These shocks are available in two stiffness adjustment options- Single Adjustable or Double Adjustable- and both are also ride height adjustable via the spring preload. The Builders Series offers the same quality, high-performance, custom JRi Shock without the custom-designed shock price.

TECHNICAL ADVANTAGES

- Multiple length options available
- Performance based setting for improved handling
- Ride Height adjustable via the spring preload
- The damping adjuster is located at the bottom of the shock
- Rebuildable and serviceable
- Each shock is dyno tested ensuring excellent performance
- These shocks mount eye-to-eye

If you are looking for a simple or straight-forward stiff to soft adjuster, we recommend the Single Adjustable where the adjustments are made with a click-style knob and Ride Height adjustability via spring adjustment.

For the more experienced user, we offer a double adjustable option that allows you to adjust high speed rebound and low speed compression/rebound combined independently with a sweeper-style adjuster and Ride Height adjustability via spring adjustment.
